#### Labelling according to the United Nations GHS

No labelling applicable

# **Product Safety Information Sheet**

A safety data sheet is not required for this product. This Product Safety Information Sheet has been created on a voluntary basis

## 2.3. Other hazards which do not result in classification

Other hazards not contributing to the classification	For the battery chemical materials are stored in a hermetically sealed metal case, designed to withstand temperatures and pressures encountered during normal use. As a result, during normal use there is no physical danger of ignition or explosion and chemical danger of hazardous materials leakage.
	It may cause heat generation or electrolyte leakage if battery terminals contact with other metals. Electrolyte is flammable. In case of electrolyte leakage move the battery from fire immediately. However if exposed to a fire, added mechanical shocks, decomposed, added electric stress by miss-use, the gas release vent will be operated. The battery case will be breaked at the extreme, hazardous materials may be released.

Moreover, if heated strongly by a surrounding fire, acrid gas may be emitted.
